The Facts about HEATING SAFETY

A Time For A Check Up: Protect your family against fire and deadly carbon monoxide. Have your heating system examined annually by a qualified service technician.

Watch Your Ashes: Allow for ashes from your woodstove or fireplace to cool before emptying them into a metal container with a tight-fitting lid. Keep the container outside.

1) Have all chimneys cleaned and inspected every year. 2) Have your heating system inspected annually by a qualified service technician. 3) Install a CO alarm to alert you to the presence of deadly carbon monoxide gas. 4) Give space heaters space: keep space heaters at least one metre (3 feet) away from anything that can burn, including curtains, upholstery, clothing and people. 5) Protect your home from sparks. Use a fire screen around the fireplace. 6) Watch for smoke coming into the room. This could indicate a blockage in the chimney or a faulty damper control mechanism. 7) Allow the ashes from your woodstove or fireplace to cool before emptying them into a metal container with a tight-fitting lid. Keep the container outside.

FACT: CREOSOTE IS A MAJOR CAUSE OF CHIMNEY FIRES. HAVE CHIMNEYS AND FLUE PIPES CLEANED REGULARLY!
